DỰ ÁN

Tên dự án: RentalZ

Thông tin về thời gian dự án: 4 months

Giới thiệu dự án:

Rental Apartments Finder is the mobile application that help people rent an apartment to be most convenient way, in accordance with the user criteria. The implementation is using SDK and Android Studio to my application. And I use Dart language of Google to design my app.

This application is able to log in, log out, register an account, and stored it to Authentication in Firebase. Then, the application can add new property to the detail and store it to Firestore Firebase. Delete property also implemented in list property. Addition, input note screen will display in the detail view.

The application can be search for a property, also using filter to look at each property want to search.

To support my application, I have added some features such as view a profile(email), take a photo in profile, take a photo in create new property, update a photo but not well implementation.
